Make waves that matter

About the AllGoodSpeakers Brand

A brand is an expectation the audience has built from the experiences they have with the company, such as the social media or frequent offline contact. This includes the visual brand and a tone of voice. With consistent and with regular exposure customers build a relationship with the company. The brand is built with customers in mind. What does it mean to them, what do they expect to see in specific channels and what is relevant currently and what is an effective communication with the target group.

The AllGoodSpeaker's visual identity communicates innovation, agility, professionalism and simplicity. The company provides measurement, scales and visualized data, which is particularly motivating for the target customer group. The company shares consistent branded materials, which contain technical descriptions of products.

The customer experiences the finished products and services. The content is engaging and to the point. The materials communicate in a storytelling style. Relevant information is communicated in printed and online media as well as social events: product descriptions as well as guide to purchasing and further engagement. The company offers premium technologies and tools, which is signaled by the tone of voice in product names and descriptions.

Table of Contents

Typface

Typeface

In AllGoodSpeakers printed and digital visual content Futura is a core element of the visual identity.

Additional fonts used in the brand materials is Garet. Garet Bold is a heavier typeface used in flyers as an alternative, bold font for statements.

Avoid

The text is formatted as described in the guidelines of this section. The brand does not apply special effects on text.

Sizing

Text is functional and legible. Size of the body text in general cases must be at least 11 pt for body text. Sub-heading the size is at least 2 ptt larger than body text.

Main headings are sized at least 250% of the body text or larger, depending on the desired style, as can be seen in example 3, however can be larger for the front page or if text is used as a stylistic element, creating enough weight to attract attention and create visually dynamic style.

Futura Futura

Rounded, narrow, sans style.
Font keywords: modern, technology, innovation, simplicity.

Garet Garet

Wide, sans serif font with a slight stroke contrast.
Font keywords: technology, directness, boldness, agility.

Case-specific formatting

Text may not be overblown and take up half of the page or more. The visual style is balanced.

Garet is used for statements and headings to attract attention.

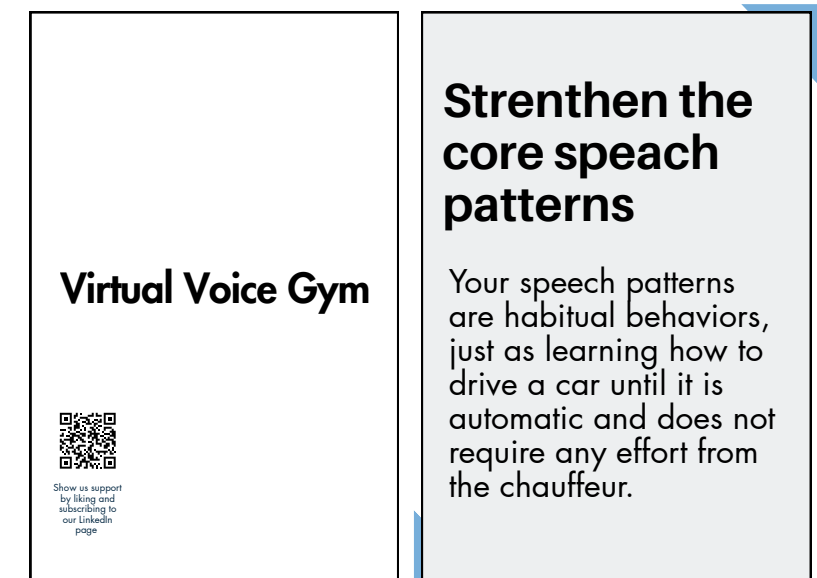

Info text is at least 9pt, and must be placed on a contrasting background for legibility.

Headings

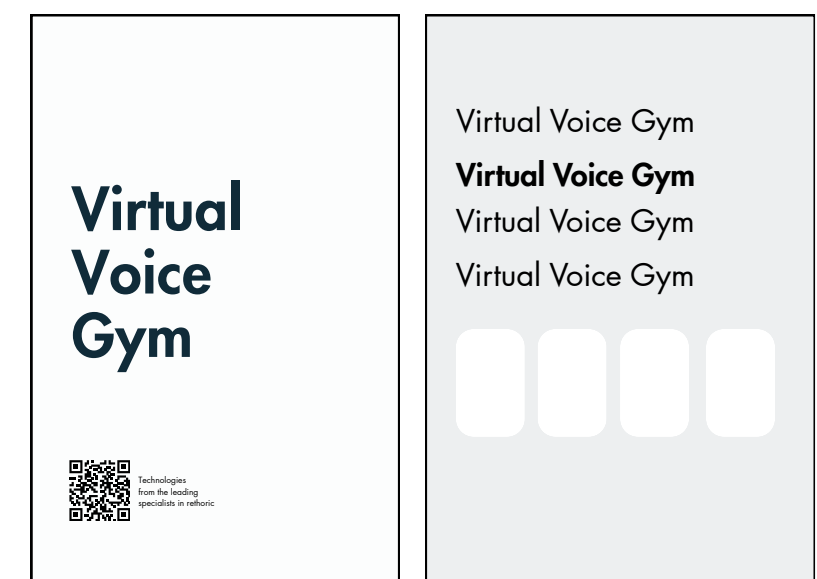

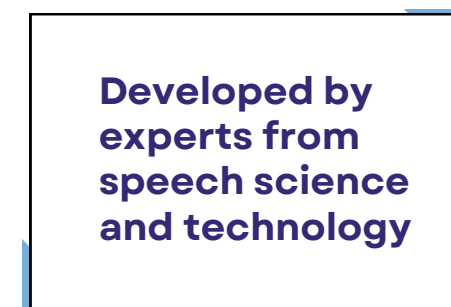

Headings and body text are separated by the size as well as distance. The main title must be at least 250% of the body text. Sub-titles and stand alone statements must be 145% of body text and bold for visual weight.

The text is large and bold to draw attention to headings and calls-to action. Headings are in regular upper and lower case format and visually balanced.

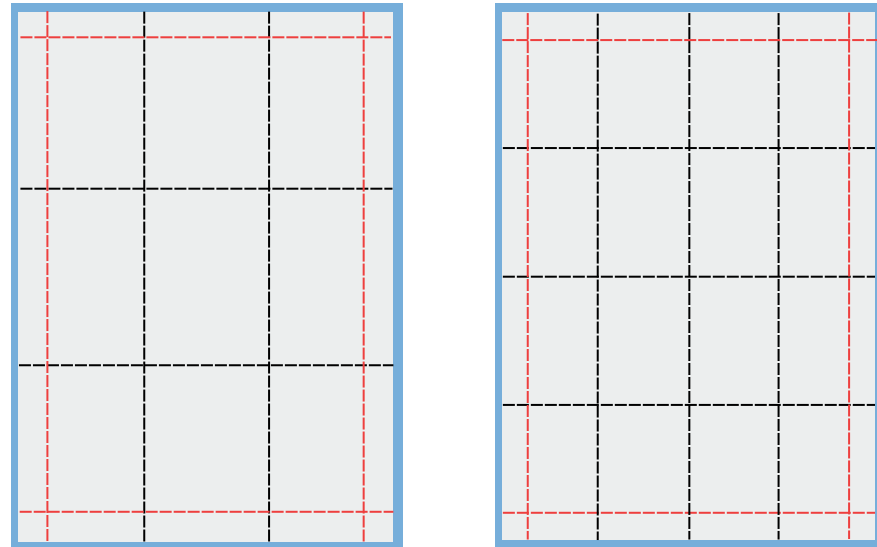

Example ??:. Use of Futura typeface.

Example ??:. Use of Garet typeface.

Layout

horizontal elements in a 3x3 grid

The layout follows a 3x3 frame horizontally, a unit takes up either a third, two thirds or the whole page. Vertically the rule may be broken, for elements of equal importance.

The mixed layout is used to create organized and interesting materials- adding visual weight and dynamics through asymmetry, an image may take up two thirds of a page and diagonal lines may separate the space. Finally, when large amounts of text should be fitted a 4x4 layout is used to intelligently and efficiently use space.

Use

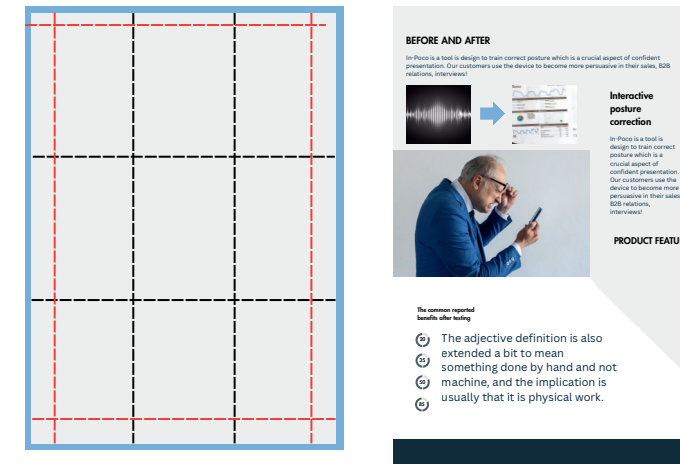

Images and stylistic elements may spread until the edge, while other content, text and logo shall not expand in the **safety zone** beyond red-lines (10mm from the edge for A5 format flyers).

Achieving a consistent visual brand

Horizontally, elements take up one third, two thirds or spread across the layout. Objects in the images follow the same grid.

In printed and digital media selling points, features, QR codes, statistics as well as call-to-action and special offers appear on a background of the AGS's primary colour, pink.

The main heading must be sized at least 250% of the body text.

Prioritizing the 3x3 grid in branded materials

Images consistently incorporate the accent colour blue and neutral tones.

Descriptions can be separated by a frame of a colourful background and a line on the left.

Colour palette

Primary colour palette

The AGS core palette consists of two primary and two secondary colours.

Use

Accent colours are used to add variety.

The primary colours are complemented with bright violet and blue or their shade for minor elements and images.

Avoid

Overuse of very saturated colours which are very overpowering next to the core palette.

Use violet and blue accent colors for illustrations or images.

Stylistic elements

Style

The brand is continuously updated and evolving, these are the most current guidelines for visual brand do's and don'ts.

The branded style creates a character and an expectation of the company in the public eye. This section demonstrates examples of **illustrations** and **shapes** and describes their function.

Illustrations

If a text badge is not used to attract attention, stylistic elements are an alternative continuation of the modern, innovative style. They are rounded, light and used for icons, diagrams and visualizing features. Illustrations with light stroke are used and distinctive pink rounded shape underlines the text.

Shapes

Shapes of photo frames or repeating elements have **rounded edges**. The keywords are innovative, tech and accessible.

Example 1: Stylistic elements

Keywords: modern, sleek, professional, tangible, innovative, technology.

Avoid

Keywords: generic, cluttered, undefined, eclectic.

Example 2: Background graphics

Example 2: Background graphics

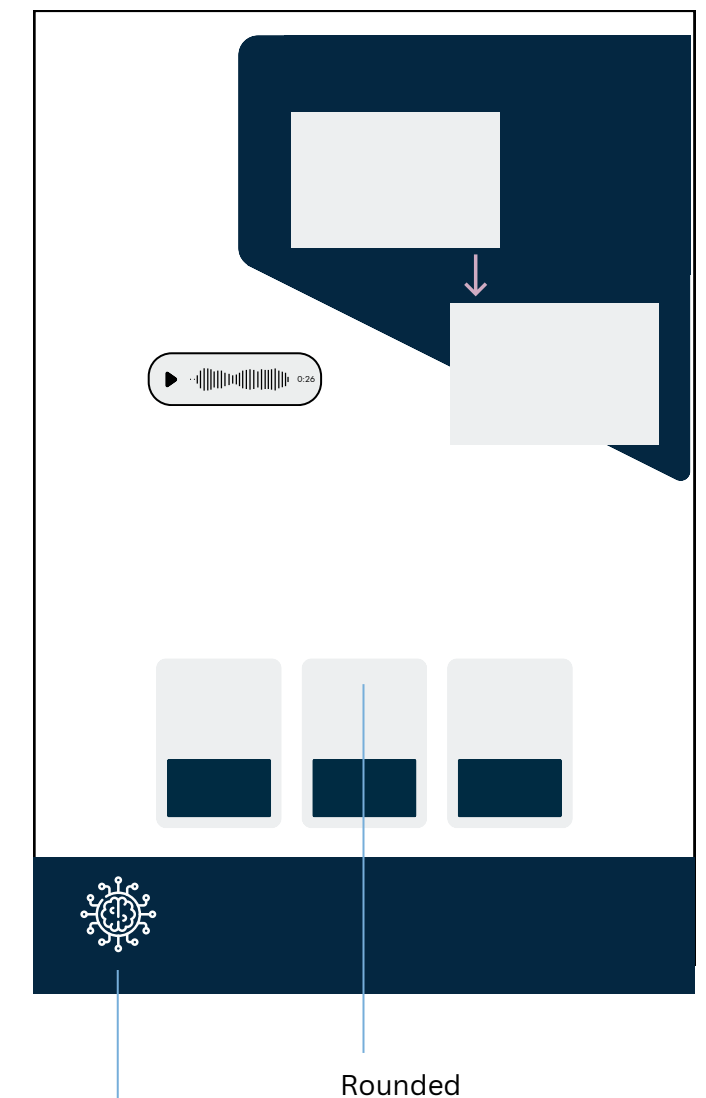

Textured background elements of frequencies, waves, including the watermark of the logo.

Continuity across media

Incorporate elements used in related product materials, such as badges, diagrams, to create a sense of connectedness.

The purpose of rounded shapes and stylistic elements is to create an innovative and modern identity (see example 3).

Example 3: Shapes and stylistic elements

Modern and Refined

Rounded

Separation vs grouping with background graphics

Section separation can be achieved, by using colored areas, **repeating elements** and **background graphics**. In the visual identity repeating elements are used to create structure. Avoid a cluttered multi-coloured layout (see example 2).

Images

Technical specifications

Images are high resolution, high contrast, in bright colours and neutrals- black and white. if images are related, they are equally **sized** or grouped (e.g. proximity or a coloured shape).

Style

Non-product images are AI generated. Images are cool toned. They are saturated and use the AGS accent colours.

Minimalistic images with a model showing a demo are used for product images, these are impersonal to “create a sense of distance”, appear in a product catalogue, online shop. The company contributes to a knowledge that is part of the greater scientific, rhetoric community, the company positions itself as the most advanced on the market with the marketing.

Avoid

Don't use warm tones, Use Ai generated images, rather than stock images. The main object should fit the frame.

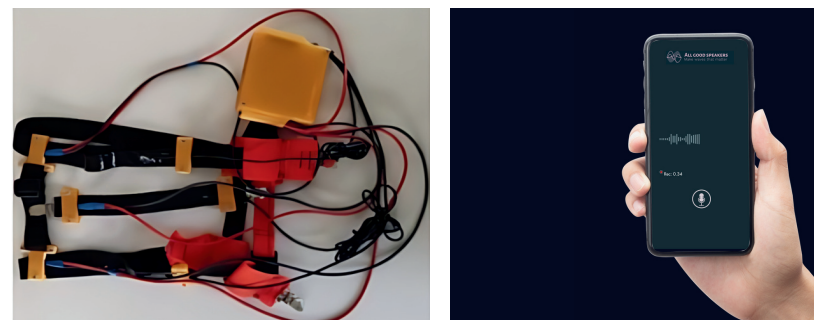

Unfiltered images, for example, Images of the clients using the product, may be shared on LinkedIn, but do not appear on printed media or the website. The marketing materials portray the company from the established and professional side.

Product images

(? AI generated super expressive images which look fantastical. Taking example from the VR flyer cover?)

Real images of products and graphs are used, as these are original in the field, and sets the company apart. The customer can read about science-based, advanced methods, and gain an unfiltered insight of the company's work.

Example: product images

Content

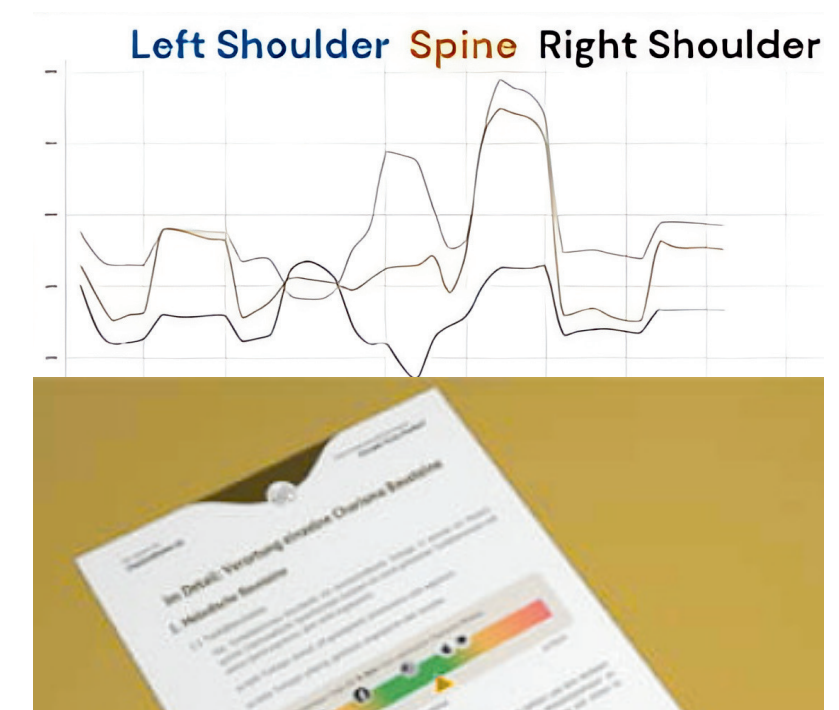

Non-product images do not necessarily show public speaking, the purpose is to attract attention. Such as an athlete mid-leap or a (scary) stage. AllGoodSpeaker's primary clients are well-off, driven individuals. The content depicts a persona or themes of achievement, work, agency the clients relate to.

Promotional images in the materials include snapshots of magazine articles and sponsors. We are open about the active work and success of the company.

Statistics and Graphs

Another type of image content, which should be present in company materials, are visual descriptors of data, such as graphs, diagrams and scales. To communicate the company's unique value proposition: the research and precise measurement techniques.

Example: graphs images

Tone of Voice

The language used along with the visual identity is academic and vivid. Emotionally the language is used to evoke curiosity, competitiveness and relevance.
